Home

This is a web application created using the Bootstrap framework with jQuery on the front-end, and a C# server backend running .NET Framework 4.7.2 and using an MSSQL database.

The ADO.NET Entity Data Model is used with Entity Framework 6 for interacting with the database content.

For development Visual Studio 2019 Community is used as the primary IDE.

About

Profile

Technology enthusiast with a passion for computers, programming, and learning. Currently focused on programming and web design, especially relating to web-components; this includes personal projects as well as contributions to open source repositories on GitHub, including Google projects. Experience building, fixing, and upgrading computers and networks, tutoring students, and assisting with various technologies. Interested in electric vehicles and systems.
